PileMedic™ was invented by Professor Mo Ehsani following 20 years of research and development. It is the only repair system that provides a seamless shell around the pile to keep all moisture and oxygen out and stop the corrosion process. FEMA and the US Army Corps of Engineers have singled out PileMedic™ as *the only product* for fast repair of columns and piles that are damaged in disasters such as earthquakes and hurricanes.

PileMedic™ SOLUTION FOR PILE EXTENSION

A PATENT-PENDING TECHNOLOGY DEVELOPED BY QUAKEWRAP, INC.

DID YOU KNOW?

FEMA and the US Army Corps of Engineers have singled out PileMedic™ as *the only product* for fast repair of columns and piles that are damaged in disasters such as earthquakes and hurricanes.

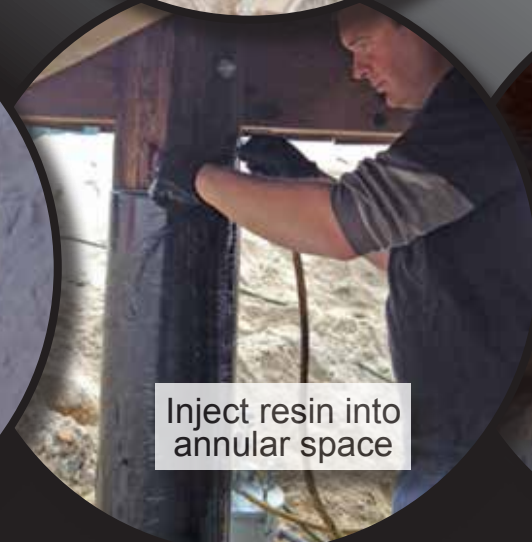

Splice pile with new pile

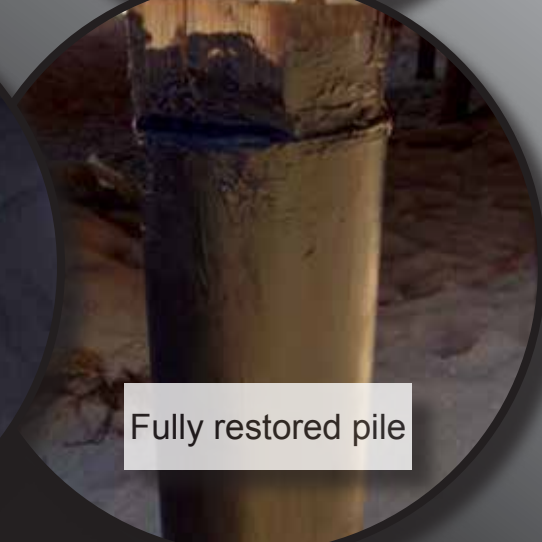

Place carbon strips around splice

Wrap PileMedic™ around pile to create a shell

Inject resin into annular space

Fully restored pile

ADVANTAGES OF PileMedic™ CARBON OR GLASS LAMINATES:

- 3-4 times stronger than steel
- Increases axial capacity beyond original strength of pile
- No weak seams along height offers uniform confining pressure (360°)
- Provides structural confinement
- No costly divers for underwater repair
- No metallic parts; does not corrode
- Grout or resin can be pressurized to penetrate all cracks and crevices
- Available in carbon or glass
- Works equally well on concrete, steel and wood or timber piles and columns
- One size fits all piles (no delays for customized jackets)
- Fastest repair & strengthening system with no traffic control!
